## Take advantage of a lung cancer screening at no cost\*

Lung cancer is the leading cause of cancer-related deaths around the world, with only 25% of Americans surviving five years, according to the National Cancer Institute. However, if caught in its earliest stages, there is a 4 in 5 chance for a cure. Adena Health is offering low-dose chest scans to screen for lung cancer in those who are most at risk.

### This service is recommended for individuals who:

- Are 50-80 years old
- Have a history of smoking at least one pack a day for 20 years, or at least two packs a day for 10 years
- Are a current smoker, or someone who has quit within the past 15 years

When patients join the lung cancer screening program at Adena Health, they receive one on one support from staff, helpful resources on preventing lung cancer, and annual screening reminders.

**Call 740.542.LUNG (5864) to register for your screening.**

\*Insurance companies will be billed, however, screenings are at no cost to the patient.
